

Portable Negative Pressure System

SafER Medical Products Enable Senior Care Facilities to Improve Flexibility for Isolating Patients with Respiratory Illness

Portable Systems Help Improve Revenues and Lower Costs

SafER Medical, LLC will showcase their innovative Respiratory Shield and Endoshield, portable negative pressure system (PNPS) products at the PACE show October 13-16, 2024 at the San Diego Convention Center.

SafER PNPS systems are easy to use, lightweight, and small enough to easily fit into any size workspace. The revolutionary SafER system is 99.99% effective in preventing the spread of respiratory illness. SafER's innovative PNPS stays with the patient throughout transport, while waiting to see their doctor, or in a shared space with other patients. Hospitals will no longer require costly negative pressure isolation rooms and senior care facilities can more cost-effectively isolate patients with respiratory illnesses.

Exposure for medical workers and caregivers can lead to missed workdays, and a huge economic impact on the medical system and workforce. Current preventative measures in hospitals and senior facilities are expensive and only accommodate a small number of patients who require isolation.

SafER portable systems enable senior facilities to optimize revenue in three specific ways:

- Group therapy or co-treatment can help with staffing and productivity billing. SafER enables completing these tasks even for patients experiencing respiratory illnesses.
- SafER can be used during Nebulizer treatment, allowing the minutes that are spent with qualified staff to be captured and submitted for higher reimbursement rates. Nebulizer treatment minutes are rarely captured. SafER allows the resident to complete nebulizer with others present without risk.
- Isolation can be billed and increases reimbursement rates significantly. SafER offers more protection than a standard nursing homeroom, without the cost of a negative pressure isolation room, which many skilled nursing facilities do not have.

In addition, facilities can achieve significant cost savings by using staff more efficiently, avoiding the costs of moving patients around, and avoiding the need for expenses to create ad hoc isolation rooms.

About SafER Medical Products

SafER Medical is comprised of a team of medical professionals who have served on the front lines of the medical community as emergency room doctors and first responders. Chief Operating Officer Todd Baker, MD, FACEP has spent decades as an emergency physician for the US Army and in a community hospital setting. CEO and Board Member Carl Baker served as a front-line firefighter for 28 years in Washington state and owns and operates several adult family homes with seniors requiring 24-hour care, earning a reputation as Best in the County for AFH Senior Housing.

About PACE

The Program of All-Inclusive Care for the Elderly, or PACE, offers a simplified way for older adults to live healthy, fulfilled lives with the right medical care and coverage. With 177 PACE programs and over 78,000 program participants in 33 states, people can enroll with a low, fixed monthly payment and receive primary and specialty care, medical supplies, prescriptions and caregiving or nursing services deemed appropriate by a designated interdisciplinary care team. At PACE, the goal is to keep our aging loved ones healthy, independent and thriving.
